

Opportunity to Purchase Pending Issuance Units

North East Scotland

Project Highlights

- Woodland will sequester more than 1,224 tonnes CO₂e over 35 years.
- Project covers 12.72 hectares and is due to be planted in 2021.
- The setting provides a great opportunity to enhance the natural environment.

Project Background

An attractive rural setting for a 13 hectare mixed broadleaved and conifer woodland creation scheme, lying in North East Scotland on the edge of a well frequented tourist area.

The setting provides great opportunities to promote engagement with local schools and to encourage outdoor education covering food production, woodland management and, of course, the natural environment.

Projected Carbon Sequestration Volumes over Project's Life Cycle

Verification: years since start date	Vintage start date	Vintage end date	Total PIUs in vintage to be listed	PIUs to Buffer	PIUs to Project

Ecological Features

This woodland creation scheme will help the natural environment and create a conservation haven for birds.

Location

The new woodland will be set in the heart of a productive farm in North East Scotland, where the farming family has already planted some successful woodland to help encourage habitat diversity. They are very keen to expand on that.

Accessibility

The woodland will be easily accessed being 3 miles off main trunk roads and having a good tarred road to within a couple of hundred yards.
