## Introduction

### Who is CarbonStore?

CarbonStore is a business division of Tilhill, the UK's leading woodland creation and forestry management company. The majority of our carbon-related woodlands are planted and managed by Tilhill's highly trained and professionally qualified forestry managers, in accordance with both the UK Forestry Standards (UKFS) and the UK Woodland Assurance Scheme (UKWAS).

### What Do We Do?

CarbonStore works with businesses and landowners to support the purchase of carbon credits generated by planting trees certified to an internationally recognised carbon standard. As such, we help mitigate the unavoidable elements of a company's carbon emissions.

### Our Mission

Our goal is to match you, as a company, with a woodland or forest that best meets your needs in terms of size, location, species mix, access rights and in the wider benefits to society which it generates.

### A Trusted and Reliable Partner

We believe that trust and integrity are vital ingredients for any transaction and these qualities are ingrained in our make-up.

Any purchase of carbon credits through CarbonStore is supported by the most robust and sophisticated legal agreements available.

Our unique partnership also ensures that our woodlands are planted and managed by our own qualified and experienced foresters and are certified and authorised by an internationally recognised authority.

# How We Can Help You

Our mission is to help businesses to harness the ability of trees to capture the balance of unavoidably released carbon as part of your net zero strategy.

## Buying Woodland Carbon Credits

We guide and support you through the process. As a business, it is important to define what benefits you want from your woodland scheme. We can help you with this. Once you know this information, you can then select a woodland from our range that best suits your needs.

- 1** We will introduce you to the landowner and facilitate negotiations.
- 2** We advise you on a fair price to pay for the carbon units (Pending Issuance Units, PIU) attached to the woodland.
- 3** We help you agree signage and access rights to the woodland.
- 4** We will help you open an account with the IHS Markit Registry.
- 5** Approve and sign the legal agreements and complete payment of the carbon credits.
- 6** The carbon credits are transferred into your account (and ownership) on the IHS Markit Registry.

Your business can then promote the benefits of your woodland carbon-offsetting project.

*“It is important that the landowner clearly understands your needs and we can facilitate this.”*

### The Magic of Trees

Planting woodlands is the most effective and natural way to mitigate residual carbon emissions. As trees grow, they directly remove carbon from the atmosphere, providing a wholly natural carbon sink. Once they mature, the carbon remains locked within the trees' timber.

Woodlands and forests range in size from a few hectares to many hundreds. Some typify the quintessential native broadleaf woodlands, while others represent the productive conifer woodlands which grow the timber to build our future homes and offices.

### Did you know?

*‘The average tree captures 3.67 tonnes of carbon dioxide for every tonne of timber it grows.’*

## Our Powerful Credentials

### The Oxford Principles

All our projects are closely aligned to the Oxford Offsetting Principles.

As such, our projects don't just avoid or prevent emissions; they remove them directly from the atmosphere before storing them permanently within their timber.

This is the purest and most genuine form of removing carbon emissions from our atmosphere.

### ICROA and TSVCM

The woodlands we plant comply fully with both the six core principles of carbon offsetting outlined by the International Carbon Reduction and Offset Alliance and the rules outlined by the Task Force for Scaling Voluntary Carbon Markets (TSVCM).

### United Nations' Sustainable Development Goals (SDGs)

By capturing your businesses residual carbon through planting trees, you are simultaneously:

- Enriching our wildlife.
- Supporting public access to woodlands.
- Filtering and cleansing our water.
- Providing the raw materials for our future homes.
- Enhancing our rivers and streams.
- Generating rural jobs.

The numerous benefits of creating woodlands support many of the United Nation's Sustainable Development Goals.

## For Everyone's Benefit

By using CarbonStore, the fruits of your environmental efforts will benefit everyone for many years to come.

As the owner of woodland carbon credits, you will know that you have played a valuable part in creating that environmentally and ecologically enriching landscape which will both protect and enhance the lives of our future generations.
